

Smart Utilities

Challenges and Opportunities: Indian Perspective

A special publication from **India Infrastructure Publishing**

**Indian
Infrastructure**

POWERLINE

Indian utilities are going through an exciting and at the same time a very challenging period. They are under pressure from regulators and governments to improve customer service as well as the overall operating and financial performance.

Meeting these objectives will not be easy. Most of these utilities, especially in power and water, have neglected customer service and have a history of operational inefficiency and financial losses. They are, for the most part, overmanned with low use of IT and low levels of automation. The management practices in use are outdated.

The utilities will need to go through a dramatic transformation and become "smart utilities". IT and IT-related technologies and solutions will play a critical role in this transformation, helping achieve higher levels of operational efficiency and managerial effectiveness.

The mission of this publication is to highlight that role, with focus on both the challenges and opportunities presented by the need to become "smart utilities". For each sector and for every topic, it will feature independent analysis, utility perspective and industry viewpoint – in the form of situation analyses, interviews, case histories and expert opinion.

The sectors covered will be power, gas and water. The topics covered will include:

- ❖ Utility Management
- ❖ Network Management
- ❖ System Planning
- ❖ SCADA/GIS
- ❖ Customer Service
- ❖ Metering/Billing/Collection
- ❖ Asset Management
- ❖ Financial Management
- ❖ Regulatory Compliance
- ❖ Field Force Management
- ❖ Fleet Management
- ❖ IT Requirements and Solutions
- ❖ Etc.

Circulation and Readership

The circulation will exceed 3,000+ with a total readership of over 30,000. In addition to paid subscriptions, this special publication will be mailed with the compliments of *Power Line* and *Indian Infrastructure* to all the top managers in every utility (in the power, gas and water sectors) and also to key officials in relevant agencies (government, regulatory, funding, etc.). A special effort will be made to market the publication to utility-related technology providers, equipment manufacturers, sector consultants, IT hardware and software solution/service providers, etc. The publication will be heavily promoted in *Indian Infrastructure* and *Power Line* magazines and at important industry events.

The publication will be of tremendous reference value and will have a long shelf-life (at least one year). The printing, production and paper quality will be of the highest standard. It will provide an excellent environment for utility-related equipment manufacturers and technology providers to showcase their products and services.
