Emerging Trends, Segment Analysis, Growth Drivers and Market Opportunities

With the grant of infrastructure status and the implementation of the goods and services tax (GST), the government estimates that investments in the logistics sector will reach $500 billion by 2025. The proposed introduction of the National Logistics Policy will support the flow of this investment. The grant of infrastructure status will enable the sector to mobilise this investment at easier terms with enhanced limits. The rising consumer demand, boom in e-commerce and boost in manufacturing are other key drivers of investments. Increased investor interest is now being witnessed across the sector, especially in the warehousing space. Private equity investors have actively invested in the sector. A shift from the pure transportation business to end-to-end services has taken place, thereby facilitating the growth of the third-party logistics (3PLs) and supply chain management industries in India. The government too has highlighted priority areas for the sector and aims to develop an Integrated Logistics Action Plan. Meanwhile, the development of dedicated freight corridors and the Delhi-Mumbai Industrial Corridor are being touted as the key drivers of change.
