Tunnelling in India: Projects, Sector and Market Outlook

Tunnel construction in India is likely to accelerate, driven by huge investments in infrastructure sectors such as hydro power, roads and highways, railways, metros, and water and sewerage systems. The industry is also beginning to adopt modern technology and designs for tunnel construction.

The report **Tunnelling in India** by India Infrastructure Research provides an in-depth analysis of the tunnel construction market across five segments – hydro tunnels, railway tunnels, road and highway tunnels, metro rail tunnels, water, sewerage and irrigation tunnels. It examines the market size and growth for each segment and provides projections up to 2016-17. It has a compilation of about 1,600 tunnels projects that are completed/under construction. In addition, planned projects for each segment have been provided. It also features case studies of noteworthy projects in respective segments.

The report provides current and projected demand for tunnelling equipment up to 2016-17. It discusses the latest trends and developments in materials and machinery, designs and techniques.

It talks about key issues and challenges in tunnel construction. It also provides the sector outlook and opportunities in tunnelling over the next three to five years.

The report is in the PDF format. In addition, a PowerPoint version is also available for presentation purposes.
