ICT Prescription

The coronavirus pandemic is forcing countries to lock down. In these turbulent times, ICT solutions such as telepresence and web conferencing have emerged as the key pillars for ensuring business continuity as workforces world over operate remotely. As more people get restricted to their homes, the use of online services is exploding. COVID-19 is changing the world as we know it; it is also leading to a step-change in organisational functioning and people mindsets, with collaboration and virtual technologies becoming the new business normal.

Enterprise Telecom: Logistics 40

New-age digital technologies such as AI, ML, IoT and blockchain are disrupting the logistics space. While AI and robotics are enabling players to automate their supply chains, blockchain is helping to address issues in document and information verification. However, the lack of relevant technology skills amongst the workforce remains a key challenge.

Telefocus: Virtualisation 46

Telecom operators across the world are working towards virtualising their networks to better manage data traffic and improve network efficiency. The enterprise space too is aggressively deploying NFV-based architecture to automate network services and offer customised solutions. Going forward, as the industry steps up 5G and IoT adoption, NFV solutions will see accelerated adoption.
