Africa is seen as one of the world's fastest growing regions and infrastructure development will help catalysing this growth. The continent's vast infrastructure deficit is a constraint on its growth, but also an opportunity to leapfrog to new, more efficient business models and technologies. While Covid-19 had led to disruptions in project delivery, raw material availability, labour supply, capacity addition and investments, activity has started to resume normalcy with the phased lifting of lockdowns across countries. As growth picks up in the post-Covid world, the region will continue to offer substantial opportunities in sector such as roads, railways, urban transport, electricity, renewables, and oil and gas. The 2021-22 edition of the report will cover a realistic assessment of the opportunities across the African countries, the impact of Covid-19 on infrastructure projects and financing, top investment destinations, and the upcoming projects and investments. The report will also include recent developments, new government initiatives and relief measures to fast track project implementation as well as provide an outlook for the sector for the next 4-5 years.
